

How to view a genially offline

Downloading your genially as an .html file allows you to preserve its interactive elements and animated effects, unlike downloading as a .pdf or .jpg file. This makes it the ideal format for viewing your genially offline.

Important: Keep in mind that you won't be able to view external content you need internet connection for like Youtube videos, social media posts, Google maps, etc

To view your genially offline once you've downloaded it:

1 Uncompress the content of the downloaded file.

Unzip the .zip file you've downloaded in a new folder.

- If you use a **Mac**, the files will be extracted automatically once you double click on the file.
- If you use **Windows**, you'll need the help of additional tools like Winrar to extract the files.

Important: All the files and folders from the .zip file should always be stored together in the same folder.

2 Open the genially.html file.

When you open the genially.html file, your genially will open in your default browser (even without internet connection).

If you have internet connection at this moment, you can see the whole process in this [video](#).
